## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-3, 5, 13, 14, and 36, drawn to an apparatus and a method for controlling the operation of a converting circuit and a transforming circuit, and connection of a switch based on a line voltage of an electric power system and/or a connection state between an apparatus and the electric power system, classified in Class 363, subclass 15.

II. Claims 4, 6-12, 16, 17, 19, 20, 37, and 38, drawn to a power converting apparatus with connectors arranged to connect the power converting apparatus to an electric power system, classified in Class 174, subclass 59.

III. Claims 15, 18, and 21, drawn to a power converting apparatus with a charge/discharge controller for a storage battery, classified in Class 320, subclass 128.

IV. Claims 22-35, 39 and 40, drawn to an apparatus and a method for controlling operation of the booster and inverter (power converter) circuits based on a type plug unit connected to an output port, classified in Class 363, subclass 146.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, III, and IV are related as subcombinations disclosed as useable in a single combination. The subcombinations are distinct from each other if they are shown to be separately useable. In the instant case, invention I has separate utility such as an apparatus and a method for controlling the operation of a converting circuit and a transforming circuit, and connection of a switch based on a line voltage of an electric power system and/or a connection state between an apparatus and the electric power; invention II has separate utility such as a

power converting apparatus with connectors arranged to connect the power converting apparatus to an electric power system; invention III has separate utility such as a power converting apparatus with a charge/discharge controller for a storage battery; and invention IV has separate utility such as an apparatus and a method for controlling operation of the booster and inverter (power converter) circuits based on a type plug unit connected to an output port. See (MPEP 806.05(d)).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
